

Supply Chain

Marsh & McLennan Companies recognizes its responsibility to conduct business in a way that protects and improves the state of the environment for future generations.

A key component to our sustainability strategy relates directly to our supply chain. Our BEGREEN Procurement program formalizes our commitment to ensuring, where feasibly possible, that the goods and services we purchase are manufactured, delivered, used and disposed of in an environmentally and socially responsible manner, and that they provide long-term value for the Company, our employees and our clients. This approach is aligned with our environmental sustainability and social responsibility commitments.

- Reducing greenhouse gas emissions.
- Reducing waste generation.
- Eliminating the use of products containing hazardous materials.
- Minimizing water consumption.
- Striving toward zero-waste-to-landfill through waste reduction, reuse, and recycling.
- Promoting the use of goods that directly or indirectly reduce our impact on the environment.
- Complying with current and anticipated legislation.

Through BEGREEN Procurement we partner with suppliers to preferentially procure goods and services on the basis of total value which, where appropriate, may include: cost, energy and water usage, transportation processes, disposal options, and the overall impact to our carbon footprint. Suppliers are encouraged to propose innovative products and approaches to create cost-effective solutions that will reduce our environmental impact.

As a global professional services firm with over 65,000 employees and clients in more than 130 countries, Marsh & McLennan Companies will continue to work to develop and implement environmentally responsible business practices throughout our organization and strive for the sustainable growth of both our own and our clients' businesses. We encourage our Suppliers to join us in the journey by supporting and furthering our environmental efforts.
